ROLL NO:240701121

USER INTERFACE DESIGN

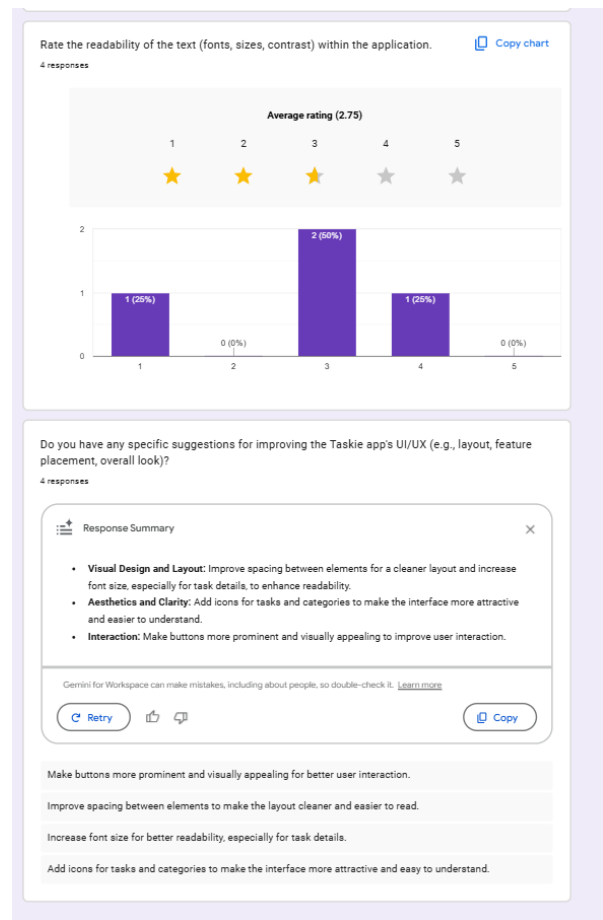

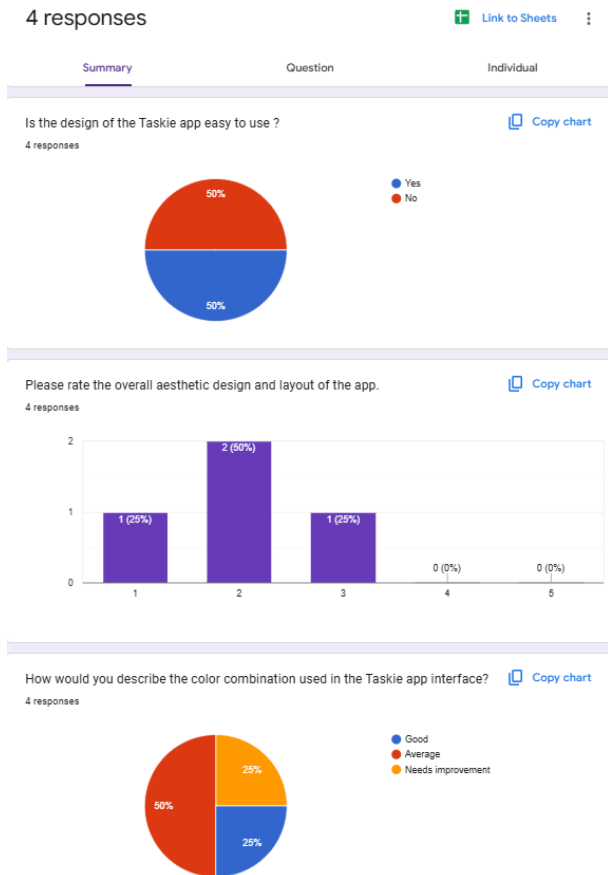

Design an application layout using different colours, text styles, and visual elements. Share the design with users through a Google Form or any other feedback collection method to gather their responses. Based on the feedback received, refine and improve the design accordingly.

Initial Design (Before feedback):

An application layout named “Taskie” was designed using different colors, text styles, and visual elements. The design included three screens: welcome screen, login screen, and home screen. The welcome screen contained the app title and a “Get Started” button. The login screen included email and password fields with a login button. The home screen displayed a list of tasks with an option to add new tasks. The design was made visually appealing using colors, fonts, and icons.

Feedback (Google Form):

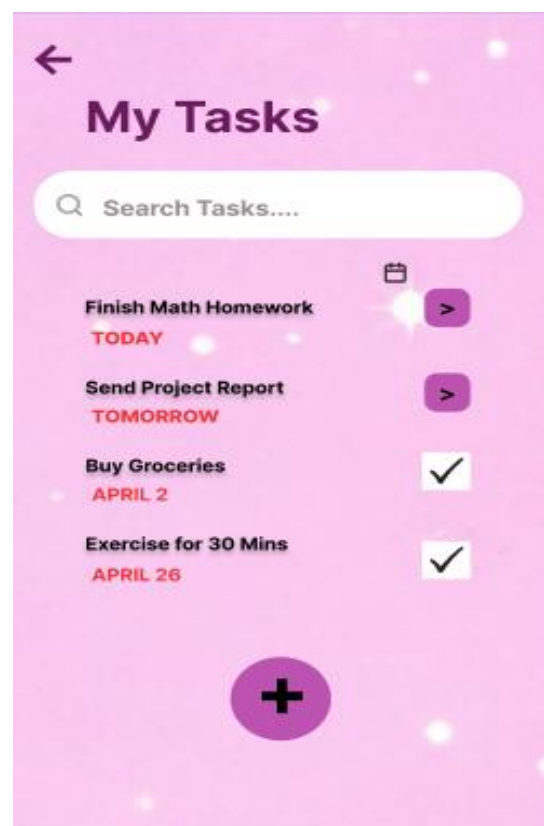

Suggestions

- Improve spacing between elements for better layout
- Increase font size for better readability
- Add icons to enhance visual appearance
- Improve color contrast for better visibility
- Make buttons more attractive and prominent

Based on the feedback collected from users, it is clear that some improvements are required in the design. Most users preferred a clean and simple layout but suggested improving spacing and alignment for better readability. Some users also recommended increasing the font size and adding icons to make the interface more interactive. Additionally, improving the color contrast and button design will enhance the overall user experience. Overall, the feedback helped in identifying areas to improve the application design.

Improved Design: (After feedback)

Improved Design (After feedback):

The application design was improved based on the feedback received from users. Changes were made by increasing the font size, improving spacing between elements, and adding icons for better understanding. The color scheme was enhanced to provide better contrast and visual appeal. Buttons were redesigned to make them more noticeable and user-friendly. These improvements made the application more attractive, easy to use, and visually appealing.
