

USER INTERFACE DESIGN

EXPERIMENT 6

Topic: RAD Model for Online Food Ordering App

NAME: DHARSHINI G

ROLL NO: 240701121

RAD (Rapid Application Development) is a software development model that focuses on quick development using prototypes and user feedback. It reduces development time and improves user satisfaction. It is mainly used for UI/UX based applications like web and mobile apps.

Key Features

Navigation:

- Home
- Categories
- Food Listing
- Food Details
- Cart
- Checkout
- Order Confirmation

User Actions:

- Browse food
- Search items
- Add to cart
- Place order
- View confirmation

Requirements

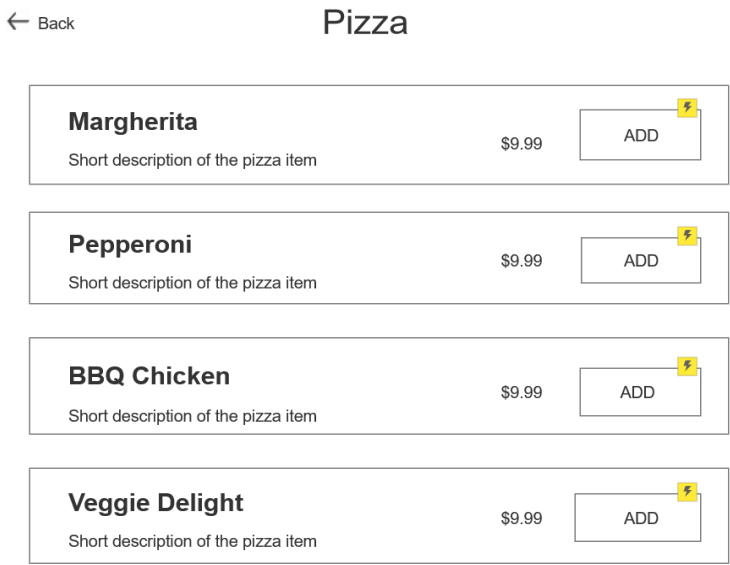

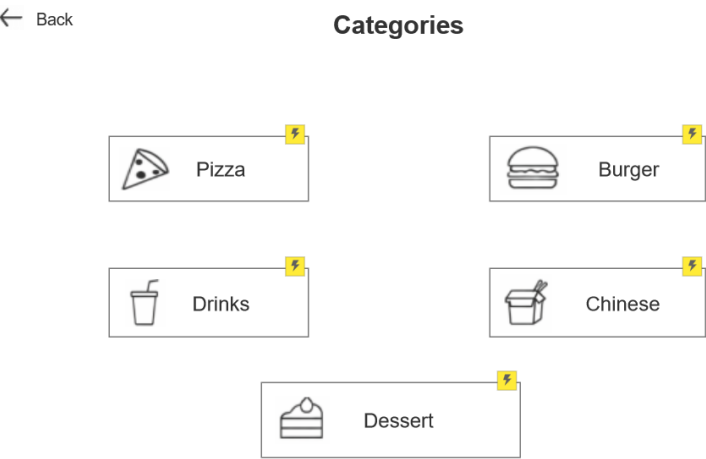

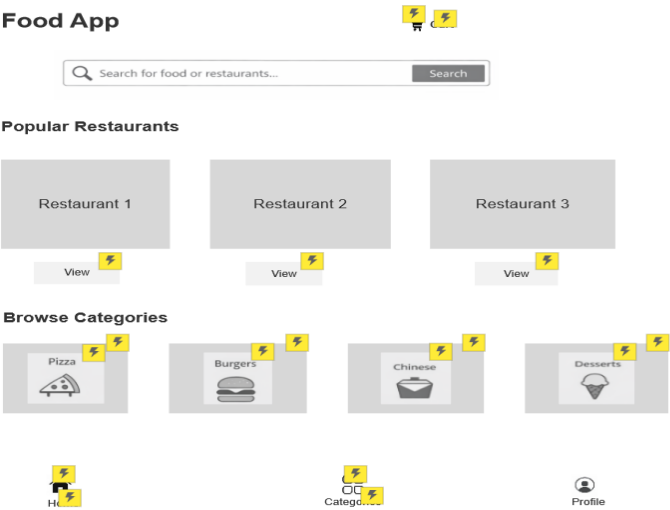

1. View food categories
2. View list of food items
3. View food details
4. Add/remove items from cart
5. Enter user details and payment
6. Place order and view confirmation

User Design

Wireframes are created using Axure tool.
The following screens are designed:

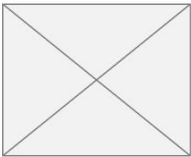

- Home Page
- Category Page
- Food Listing Page
- Food Details Page

- Cart Page
- Checkout Page
- Order Confirmation Page

Order Confirmation

Your order has been placed successfully!

Order ID: #123456

Back to Home

Wireframe Explanation

- Home → shows categories
- Category → shows food types
- Food Listing → shows items
- Food Details → shows price and add option
- Cart → shows selected items
- Checkout → user enters details
- Confirmation → order success

Construction Phase

Interactive prototype is created using Axure.
Screens are connected using OnClick interactions.

Flow:

Home → Category → Food List → Details → Cart → Checkout → Confirmation

Testing & Iteration

The prototype is tested using preview mode.
Improvements are made based on usability and navigation.

Cutover Phase

Final prototype is completed and ready for implementation.
It can be shared with developers for development.

Conclusion

RAD model helps in fast development and easy modification.
It is suitable for UI-based applications like food ordering apps.
