

USER INTERFACE DESIGN

EXPERIEMENT-2

Topic: Chunking and Memory Recall

NAME: DHARSHINI G

ROLL NO: 240701121

Design a UI where users recall visual elements (e.g., icons or text chunks).
Evaluate the effect of chunking on user memory.

Introduction:

Chunking is a method where information is divided into small groups to make it easier to remember. In this experiment, a game-based UI is designed where users see food images for a short time and then recall them. The experiment compares unchunked display and chunked display to observe memory recall.

FRAME 1: INSTRUCTION PAGE

This screen gives instructions to the user before starting the task.

Content

- Title: *Memory Recall Task*
- Instructions to remember items
- Time limit (10 seconds)
- START button

Reason

- Helps user understand the task clearly
- Reduces confusion
- Prepares user mentally before starting

FRAME 2: CHUNKING PHASE

In this screen, food items are displayed in grouped form (chunks) to help users remember them easily.

Content

- Food images grouped into categories
- Clear spacing between groups
- Time limit shown (10 seconds)
- NEXT button

Reason

- Related items are grouped together
- Users can remember categories instead of individual items
- **Improves recall performance**

FRAME 3: RECALL PHASE

his screen asks the user to recall and select the items they remember seeing.

Content

- Food images including correct items and distractors
- Selection indicators
- SUBMIT button

Reason

- Tests user memory
- Checks effectiveness of chunking
- Distractors help measure recall accuracy

FRAME 4: RESULT PAGE

This screen displays the result of the memory recall task.

Content

- Score (Example: 6/10 correct)
- Feedback message
- Play Again button
- Home button

YOUR SCORE

6/10 CORRECT

Great Job !
